

DISTURBED AREA WORKSHEET

Disturbed Area includes the affected area of activities that alter the existing vegetation and/or underlying soil of a site, such as clearing, grading, site preparation (e.g., excavating, grubbing, cutting, and filling), soil compaction, and movement and stockpiling of top soils.

Use the table below to estimate the disturbed area for your construction project. This is the total area disturbed on the subject property during construction, not just the footprint of the proposed development.

What impacts or activities are included in a disturbed area calculation?

- Areas affected by vegetation clearing
- Areas affected by timber harvest activities
- Excavation – removal and fill
- Scalping, blading, and bulldozing
- Stockpiling
- Material storage areas
- Septic feasibility pits
- Septic drain field installation areas
- Areas disturbed by well drilling rigs
- Construction entrances, access roads and equipment pathways

Only the total area needs to be entered in acres.

AREA	Square Feet (sf)	Acres (ac)
Clearing		
Excavation		
Stockpiles & Materials		
Septic Area(s)		
Construction Entrance(s)		
Driveway & Access Roads		
Other		
TOTAL		

To convert square feet to acres:

_____ sq. ft. ÷ 43,560 = _____ acres
